

# Using tensor networks to simulate concatenated bosonic codes

by Jean-Baptiste Bertrand

# End Goal

# Simulate system with *large* number off cavities

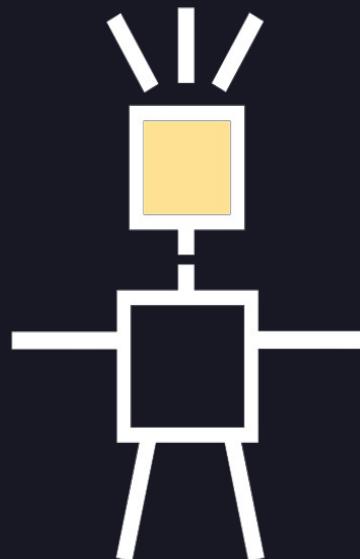

e.g. :

# Means

# Using the ITensors package to represent physical systems

julia

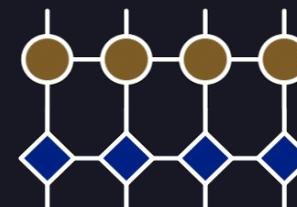

ITensors.jl

Repersenting operators by tensors

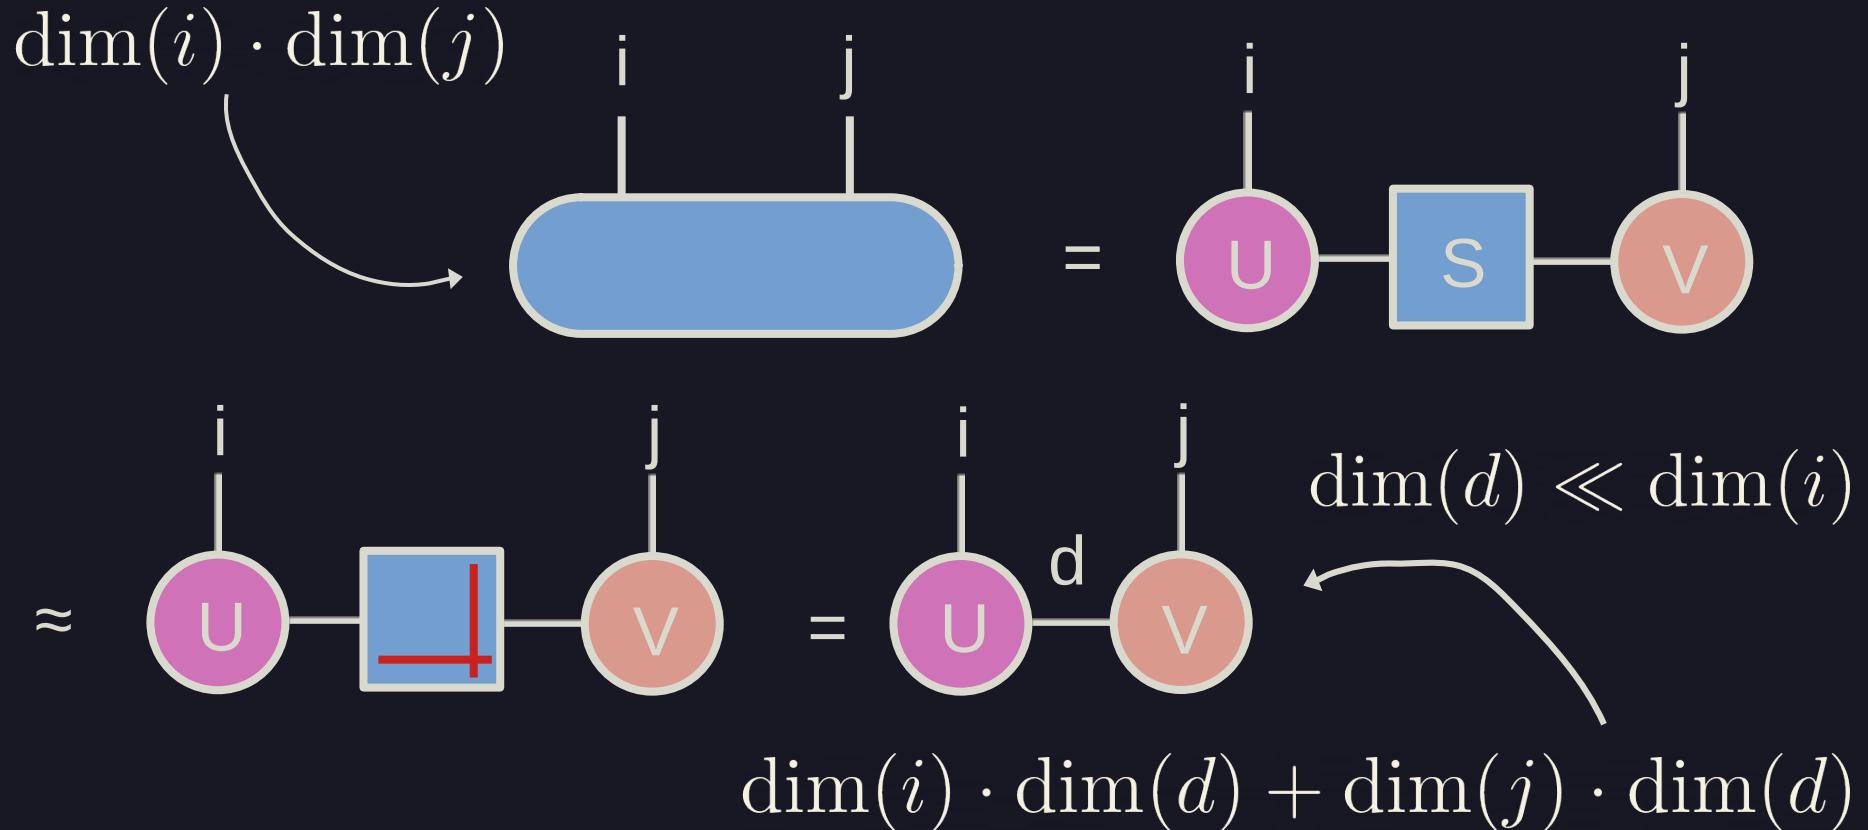

Repersenting systems with MPS/MPO

# Why use tensor networks?

Great memory saving some techniques (e.g. SVD)

# Other means

Combine the use of tensor network with other thecnique  
(e.g. sBs basis)
